WHAT DO WE PROVIDE AND WHY IS IT IMPORTANT

United IMS Consultancy, offers the following services

QUALITY MANAEGMENT SYSTEMS	ENVIRONMENTAL SYSTEMS	OCCUPATIONAL HEALTH AND SAFETY	PRODUCT CERTIFICATION	LEAGL COMPLIANCE
----------------------------------	--------------------------	--------------------------------------	--------------------------	---------------------

These services are crucial for several reasons:

1. **Quality Management Systems (QMS):** Ensures that products and services meet customer expectations and regulatory requirements, leading to improved quality, customer satisfaction, and business efficiency.
2. **Environmental Management (EMS):** Helps organizations minimize their environmental impact by managing and reducing waste, emissions, and resource use, which is important for sustainability and compliance with environmental regulations.
3. **Occupational Health and Safety (OHS):** Protects employees' health and safety by identifying and mitigating workplace hazards, which reduces accidents, injuries, and related costs while ensuring compliance with safety regulations.

4. **Product Certification:** Provides assurance that products meet specific standards and regulations, which can enhance marketability, customer trust, and access to new markets.
5. **Internal Auditing:** Helps organizations assess their compliance with internal policies and external regulations, identify areas for improvement, and ensure that processes are working effectively.
6. **Compliance:** Ensures adherence to legal and industry standards, reducing the risk of legal issues, fines, and damage to reputation.

These services collectively contribute to operational excellence, risk management, and long-term business success.

OUR EXPERTIES

1. IATF 16949:2016

Necessity: This is a global standard for automotive quality management systems, essential for organizations in the automotive industry. It ensures that suppliers meet industry-specific requirements and enhance product quality.

Advantages:

- Improved product quality and reliability
- Increased customer satisfaction
- Better risk management and compliance with automotive industry requirements

Processes:

- Develop and implement a quality management system tailored to automotive requirements
- Conduct internal audits to assess compliance
- Review and refine processes based on audit findings
- Engage in continual improvement activities

2. ISO 9001:2015

Necessity: This is a widely recognized standard for quality management systems applicable to any organization. It helps organizations ensure they meet customer and regulatory requirements.

Advantages:

- Enhanced customer satisfaction
- Improved process efficiency and effectiveness
- Greater consistency and reliability in products and services

Processes:

- Define and document quality management processes
- Implement the quality management system
- Conduct internal audits and management reviews
- Continuously improve the system based on performance metrics

3. ISO 14001:2015

Necessity: This standard focuses on effective environmental management. It's crucial for organizations aiming to reduce their environmental impact and comply with environmental regulations.

Advantages:

- Reduced environmental impact and waste
- Compliance with environmental regulations

- Enhanced corporate image and stakeholder trust

Processes:

- Identify and assess environmental impacts
- Develop and implement an environmental management system
- Monitor and measure environmental performance
- Conduct regular audits and reviews to ensure compliance

4. OHSAS 18001/ISO 45001

Necessity: These standards focus on occupational health and safety management systems. They help organizations ensure a safe and healthy work environment.

Advantages:

- Reduced workplace accidents and illnesses
- Improved employee safety and morale
- Compliance with health and safety regulations
- **Processes:**
- Identify workplace hazards and assess risks
- Develop and implement safety policies and procedures
- Train employees on safety practices
- Monitor and review safety performance

5. CE & ISI Marking

Necessity: CE marking is required for products sold in the European Economic Area (EEA), and ISI marking is a certification for products in India. These markings indicate that products meet specific safety, health, and environmental requirements.

Advantages:

- Access to international markets
- Enhanced product credibility and consumer trust

- Compliance with regulatory requirements

Processes:

- Ensure products meet relevant standards and regulations
- Conduct necessary testing and evaluations
- Obtain certification from recognized bodies
- Apply the CE or ISI mark to products

6. Internal Auditing

Necessity: Internal audits are essential for assessing compliance with organizational policies and external regulations. They help identify areas for improvement.

Advantages:

- Improved compliance and risk management
- Identification of process inefficiencies and non-conformities
- Enhanced accountability and transparency

Processes:

- Plan and schedule internal audits
- Conduct audits according to predefined criteria
- Document findings and develop corrective actions
- Review and follow up on audit results

7. APQP, PPAP, SPC, MSA, FMEA

Necessity: These tools and methods are critical for quality assurance in manufacturing, particularly in the automotive and manufacturing industries.

Advantages:

- Improved product quality and consistency
- Enhanced ability to meet customer requirements

- Better risk management and process control.

Processes:

- **APQP (Advanced Product Quality Planning):** Develop and implement a quality plan for new products.
- **PPAP (Production Part Approval Process):** Verify that production processes meet customer requirements.
- **SPC (Statistical Process Control):** Monitor and control processes using statistical methods.
- **MSA (Measurement Systems Analysis):** Assess and improve measurement systems.
- **FMEA (Failure Modes and Effects Analysis):** Identify and address potential failure modes in processes or products.

8. 5S, KAIZEN

Necessity: These methodologies are essential for workplace organization and continuous improvement. They help streamline processes and enhance productivity.

Advantages:

- Improved workplace organization and efficiency
- Enhanced employee morale and engagement
- Continuous process improvement and waste reduction

Processes:

- **5S:** Sort, Set in order, Shine, Standardize, Sustain—implement these steps to organize and maintain a clean and efficient workspace.
- **KAIZEN:** Foster a culture of continuous improvement through small, incremental changes.

9. MPCB Consent & Compliances

Necessity: Compliance with Maharashtra Pollution Control Board (MPCB) regulations is required for organizations operating in Maharashtra, India, to manage environmental impacts.

Advantages:

- Compliance with local environmental regulations
- Reduced environmental impact and legal risks

Processes:

- Obtain necessary consents and permits from MPCB
- Implement environmental management practices
- Monitor compliance and report as required

10. The Factories Act 1948 Compliances

Necessity: This Act regulates working conditions in factories in India, ensuring safety, health, and welfare of workers.

Advantages:

- Improved worker safety and health
- Compliance with legal requirements
- Reduced risk of legal penalties

Processes:

- Ensure factory operations meet the Act's requirements
- Implement safety and welfare measures
- Maintain records and report as required

11. DSH (Factories Act)

Necessity: Dish compliance is specific to the Factories Act in India, focusing on safety and health regulations in manufacturing facilities.

Advantages:

- Enhanced workplace safety and health
- Compliance with specific legal standards

Processes:

- Adhere to safety and health regulations outlined in the Factories Act
- Conduct regular inspections and training

12MPCB Regulations.

Necessity: Similar to MPCB consent and compliances, these regulations focus on environmental protection and pollution control.

Advantages:

- Compliance with environmental standards
- Improved environmental management practices

Processes:

- Follow MPCB regulations for environmental control
- Implement and monitor environmental protection measures

13. Environmental Social Governance (ESG)

Necessity: ESG criteria assess an organization's commitment to environmental sustainability, social responsibility, and ethical governance.

Advantages:

- Enhanced corporate reputation and stakeholder trust
- Improved risk management and sustainability practices
- Better alignment with global standards and expectations

Processes:

- Develop and implement ESG policies and practices
- Monitor and report on ESG performance
- Engage with stakeholders and address ESG-related issues

Each of these services plays a critical role in ensuring that organizations operate effectively, comply with regulations, and continuously improve their processes and products.
